#### Election/Restriction

1. All claims are examined.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gibbons et al (US 5032009, IDS reference).

Gibbons discloses an alignment layer comprising anisotropically absorbing molecules, wherein the anisotropically absorbing molecules comprises liquid crystal compounds.

Gibbons discloses exposing the anisotropically absorbing molecules to linearly polarized light of a wavelength or wavelengths within the absorption band of the anisotropically absorbing molecules.

Gibbons discloses the molecules exposed by linearly polarized light through at least one mask having a pattern, wherein the mask is commonly removed after exposure.

Gibbons discloses that his invention employs *conventional* liquid crystal display configuration (see Figure 1), wherein the conventional configuration comprises a pair of substrates, a liquid crystal medium sandwiched between the substrates, each substrate comprises an electrode formed thereon, an alignment layer formed at least on one of the substrates.

Art Unit: 2871

Depositing method such as spin coating or dip coating is common and known in the art.

The recited thickness' range for the alignment layer is at least overlapped the known and common range in the art.

The recited anchoring surface energy' range is at least overlapped the common range (1 erg/cm<sup>2</sup> to 10-3 erg/cm<sup>2</sup>).

#### Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
